

# GU LINER SYSTEMS

## GU CONE

GU Cone Liner will compliment any lined manhole structure with corrosion resistance, compliance with H-20 loading and easy step or ladder installation. Very simple precast plant set-up, no internal seams, one piece. GU Cone Liners may be used with other riser liner systems. Concrete grade rings become fully protected from H<sub>2</sub>S corrosion and groundwater infiltration when a GU Convertible Collar is added on top of the cone.

## BIG 5

### Advantages of GU Cone Liner

- One piece PE/PP or FRP composite construction
- Incorporates a lined opening of a diameter to accept a grade ring protective liner with a 24 inch diameter access opening (GU Convertible Collar)
- Incorporates an outward facing horizontal return on top and bottom of the structure
- Excellent and well proven interface with precast concrete
- Fast and easy installation
