

Manhole

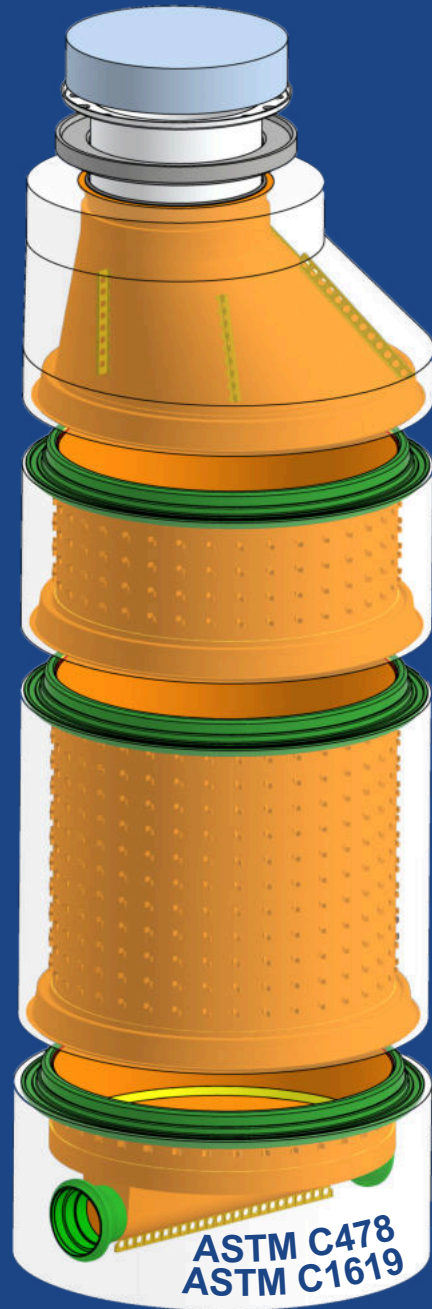

FULLY LINED MANHOLE SYSTEM

THE NO FIELD WELDING SOLUTION!

FULLY LINED MANHOLE INCLUDING JOINT LINING

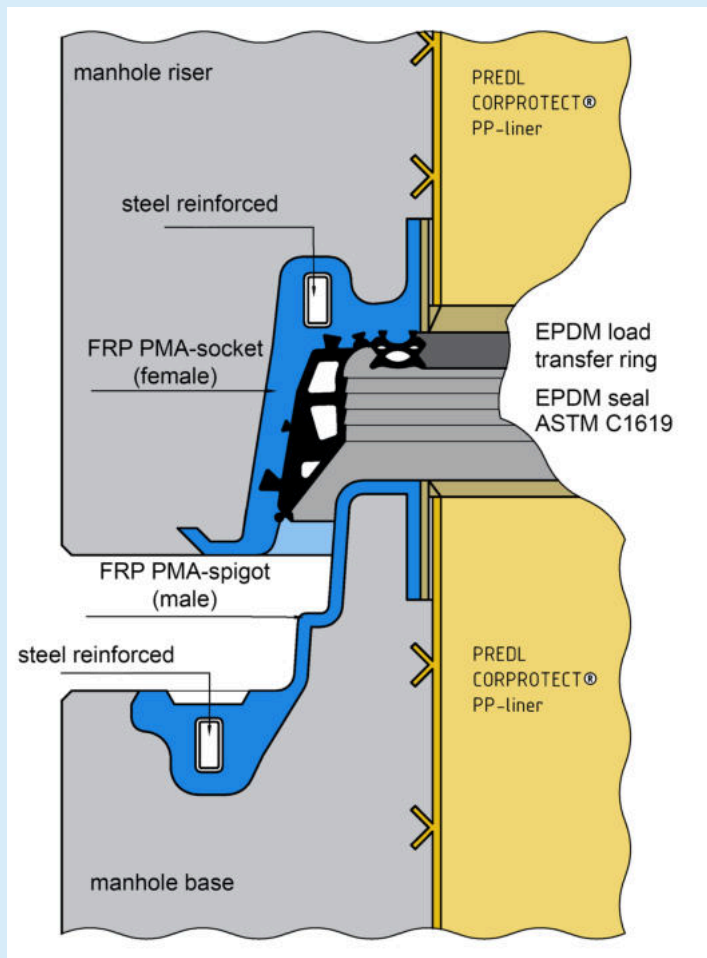

PMA MANHOLE LINER SYSTEM

PREDL baseliners and concrete have always been the perfect combination. PREDL's PMA manhole liner system in combination with PP- CORPROTECT®, enables a completely corrosion protected, gas tight and watertight manhole manhole system including patented joint technology with a lined joint offering an embedded load transfer gasket.

The PMA joint remains flexible eliminating the risk of future groundwater infiltration in the event of structural movement or shifting.

PMA PREMIUM JOINT LINING

- Corrosion protection pH 2-12.
- Long life span for heavily used manholes.
- Superior economical solution for protecting concrete surfaces from corrosion.
- Improved performance against abrasion and hydraulic erosion.
- Prevents inflow, infiltration, and exfiltration.
- Lined joint with embedded load transfer EPDM gasket.
- Boasts a completely water and gas-tight seal.
- Completely eliminates field welding.
- Meets and exceeds all precast concrete manhole specifications.
